ABSTRACT OF THE DISCLOSURE

A weather strip includes a U-shaped securing portion having a U-shaped configuration comprised of a transverse base portion and two parallel gripping portions extending from opposite ends of the transverse base portion. A wall member is spaced from the transverse base portion and is connected thereto at opposite ends to define a compartment for receiving a pressure sensitive element having spaced apart electrodes. A projection is formed on the transverse base portion and extends into the compartment in engagement with one side of the pressure sensitive element to space the pressure sensitive element from the transverse base portion. Upon application of pressure to the wall member, the pressure sensitive element will be deformed about the central projection to bring the electrodes into contact with each other.
